Develop a design system

Project Title	Develop a design system
Project Summary	Build a pattern library to make our site sustainable. To align with design best practices, we're requesting support for building out a pattern library for our open-date site.
Country	United States

Project Description

Also called front-end style guides, pattern libraries help teams quickly deploy new web features, maintain design consistency and coherence, and avoid repetition. We're looking for candidates with front-end web design and development experience to assist with inventorying design components, assessing gaps, writing documentation, and deploying the pattern library in the open.

Through our open-data site we are informing policy debates and raising public awareness by building the definitive source of timely and useful data about how the government manages federal energy and mineral resources, revenue, and disbursements. This is a unique opportunity within the government to work with distributed, remote team of technologists and subject-matter experts that work in an iterative manner.

Required Skills or Interests

Skill(s)
Coding
Design thinking
Website design
